

*HELLO ! *

* This is ADITYA KUMAR from india . After such a spectacular and educative conference , we are back home . But as decided at the conference we need to continue with our respective environmental projects and bring about enhancement in the understanding of the people over the major environmental issues . My project to the TUNZA CHILDREN'S CONFERENCE was ' SOLAR ELECTRICITY GENERATOR ' . Unfortunately , i didn't get the chance to present my project there still i shared about my activities to hundreds of people , in STAVANGER as well as in india . *

* I shall like to continue with my activities . I have planned that out of the 1000 students in my school , i shall influence the minds of at least 50 students to use solar energy resources , and then i shall plan a tour and take them along with their parents to the SOLAR ALTERNATIVES CENTRE in PATNA where they will get to know about solar energy resources . For more information , refer to www.solar-alternatives.com . *

* To carry out this activity , I need to hire at least four buses and provide refreshment for all the people . SO , *

* TOTAL MEMBERS = 152 (50 STUDENTS + 100 PARENTS) + ME AND MY CHAPERONE*

* AMOUNT FOR HIRING 4 BUSES = Rs 2000 * 4 = Rs 8000*

* REFRESHMENTS FOR ALL = 152 * 100 =Rs 15200*

* THEREFORE , TOTAL COST PLAN = Rs 8000 + Rs 15200*

* = Rs 24,000 (approx.)*

* I shall be able to provide financial support of 50% of the total cost plan but for the rest , I need your help . *

*Secondly , I have planned that with the help of some of my friends , I shall do house to house canvassing in my locality and urge the people to use solar energy resources . Disappointing to say that there are no facilities for electricity in my village, Amarpura and the life and the standard of the people is really pathetic there. According to me , solar energy should be used there to generate electricity. Through educative seminars in my city and highlighting it on media ,i shall try to bring the attention of the administration towards this curse. For arranging these seminars i shall need at least Rs 20,000 of which i am ready to bear half the total cost but for the rest , I need your help . I have also already requested the principal of my school to use solar energy to run the various electrical devices in our school . *

* Hopefully , i'll be able to carry out these activities in the next two years successfully and play a very small but important role in saving our mother earth from extinction . *

*

ADITYA.
